

## SUSTAINABLE CONSTRUCTION

# Declaring more product information

In 2015 we developed our first Environmental Product Declarations, covering six products, including aggregate, asphalt and concrete solutions. This fulfilled our target to generate EPDs for key products by the end of 2015, putting us ahead of customer expectations and becoming the first company in our sector to launch an EPD tool, and provide the world's first ever EPD for asphalt.

Our EPDs are compliant with the international EN 15804 standard, and have been independently assessed and verified by BRE. They provide life cycle analysis information in a clear and standardised format, taking into account a number of different indicators including embodied carbon, raw material use and toxicity.

We plan to increase the range of products for which we have EPDs in the future, and will launch more in 2016.
