

Tarmac's industry leading safety park

“We want to leave a safety legacy for those people who join the company and industry in years to come; it’s vital we invest our time and resources into giving our people and our partners world class learning opportunities.”

Peter Kay, Head of learning and development

In 2018, we began development of an industry leading Safety Park at our Nether Langwith site near Mansfield, Nottinghamshire.

The dedicated learning facility has been set up as part of an operational site where new operators will be able to gain hands-on practical experience and training relating to the different areas of our business. It will be home to our operational inductions, the professional operator development programme and training in both technical skills and behavioural safety.

Phase one of the Safety Park opened in the Autumn of 2018. In this first phase, training focused on quarry operators, occupational hazards as well as colleague and contractor onboarding – all new starters in an operational role will attend the safety park for their formal introduction to the business and essential new-starter safety training.

Matt Gibbs, senior manager for operational competence, said: “The Safety Park will give us real time learning opportunities to improve safety related topics such as isolation and stored energy training, conveyor safety and mobile plant safety as well as highly skilled tasks such as confined space and rescue training.”
